## get the goof! tuesday, february 3

| $x$ | $y$ |

A student looked at this function table. "Another way to show this is
to write the equation below."

$$
y=-7 x+2
$$

What is her goof?

## GET THE GOLF! THURSDAY. FEBRUARY 5

 Ms Van Winkle solved this equation:$$
4-6(w+2)=10
$$

$$
-2(w+2)=10
$$

$$
-2 w+(-4)=10
$$

$$
-2 w=14
$$

$$
w=-7
$$

Where did she goof? What should the solution be?
